AMENDMENTS TO THE SPECIFICATION

One embodiment of the invention is implemented as a program product for use with a computer system such as, for example, the system 101 shown in FIG 1. The program product could be used on a computer 102, on a remote client 104, or any combination thereof, or on other computer systems or processors. The program(s) of the program product defines functions of the embodiments (including the methods described herein) and can be contained on a variety of signal-bearing media. Illustrative signal-bearing media include, but are not limited to: (i) information permanently stored on non-writable storage media (e.g., read-only memory devices within a computer such as CD-ROM disks readable by a CD-ROM drive); (ii) alterable information stored on writable storage media (e.g., floppy disks within a diskette drive or hard-disk drive); and (iii) information conveyed to a computer by a communications medium, such as through a computer or telephone network, including wireless communications. The latter embodiment specifically includes information downloaded from the Internet and other networks. Such signal bearing media, when carrying computer-readable instructions that direct the functions of the present invention, represent embodiments of the present invention.
